募集要項

- Develop and implement business critical systems using Java and Cloud-based technologies
- Work with regional teams to ensure systems stability, functionality and efficiency.

Client Details

- This company is one of the largest global financial firms with a long history in Japan, providing wide range of clients including corporate and government agencies.
- The technology team works together with the global counterparts to provide and support technology solutions using state-of-the-art technology.

Description

- Perform feasibility studies, time and cost estimates, IT planning, applications development, model development and set up and implement new/revised systems and programs to meet the business needs or user areas.
- Monitor all development process phases and analysis, design, construction, testing, and implementation
- Provide support on applications to business users

- Analyse complex issues, evaluate business and system process using your expertise of applications development
- After post-implementation analysis of business usage, suggest and develop security measures for successful system design and functionality
- Be a mentor to new team members
- Be a subject matter expert to stakeholders and other members

Job Offer

- Hybrid working style
- Generous paid leaves: bereavement/marriage leave (applicable for those in same-gender or in common-law partnerships), childcare leave, nursing leave, sabbatical leave etc.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Nina Kato on +81 3 6627 6081.

スキル・資格

- Strong communication skills in English (business level)
- Experienced in relevant fields
- Experience in: system analysis, programming software applications, managing and implementing projects
- Application development experience in Java, MS-SQL, Python, Cloud technology
- Consulting and project management knowledge, including Agile methodology
