募集要項

- As a technical architect, you will be responsible for defining requirements, designing, building, implementing and deploying infrastructure that incorporates security in compliance with global security standards.
- After completing the above projects, you can continue working on other projects as a technical architect, or you can change your role to a consultant or project manager and work on other projects.
- As a Technical Architect, you will be responsible for the requirements definition, design, construction, introduction and deployment of infrastructure that incorporates security that complies with global security standards.
- After the above project is completed, you can continue to participate in other projects as a Technical Architect, or you can change your role to a consultant or project manager and be involved in other projects.

スキル・資格

- Leadership: Ability to set and share visions and goals for solving customer issues and navigate customers and internal stakeholders
- Expertise: No particular requirements. If you have interest and skills in each field (self-study is acceptable), you can

ensure the quality of delivery. Experience in IT infrastructure, network design and management, customer support, or some other IT-related delivery. Experience in pre-sales of cybersecurity products and solutions, SOC or MSS is preferred.

- Communication skills: Ability to build good relationships with customers and internal stakeholders and communicate appropriately (written and verbal)
- Diversity: People with an inclusive mindset who can work with professionals from different languages, cultures and specialties

Preferential treatment

- All positions can be improved through in-house training and coaching, so we do not require a perfect skill set when joining the company. We welcome candidates with various security certifications (CISSP, CISM, SANS, etc.).
- There are no restrictions on the industry. Experience in the manufacturing, high-tech, or financial industries is preferred.

Japanese: Native level Japanese, business level English required

- Leadership: Able to set and share a vision and goal for solving customer problems and navigate customers and related internal stakeholders
- Expertise: Does not matter. Interests and skills (self-study acceptable) in various fields can ensure delivery quality. IT infrastructure, network design and management, customer support, some delivery experience related to IT. Pre-sales of cybersecurity products and solutions, as well as SOC and MSS experience are preferred.
- Communication skills: Able to build good relationships with customers and related internal stakeholders and communicate appropriately (written and verbal)
- Diversity: Able to have an inclusive mindset and work with professionals of different languages, cultures and expertise

Preferred

- All positions can be improved by utilizing in-house training and coaching, so a complete skill set is not required at the time of joining the company. Holders of various security qualifications (CISSP, CISM, SANS, etc.) are welcome.
- Industry is basically not a question. Experience in manufacturing, high tech, and finance industries is preferred.

Japanese language :Native level japanese required and business level english
